Zeeland MI 49464**

---

**Electric Rate Summary**  
Effective January 1, 2009

**Rate A: Residential**

|                          |                  |
|--------------------------|------------------|
| Service Charge:          | \$6.00 per month |
| Energy Optimization Fee: | \$0.35 per month |
| Energy Charge:           | 5.9¢ per kWh     |

**Rate B: General Secondary Service**

|                          |                   |
|--------------------------|-------------------|
| Service Charge:          | \$13.50 per month |
| Energy Optimization Fee: | \$2.00 per month  |
| Energy Charge:           | 7.4¢ per kWh      |

**Rate C: Secondary Demand/Energy Rate**  
**(Minimum kw: 60% of last 11 months or minimum – 5kw - \$52.50)**

|                          |                                  |
|--------------------------|----------------------------------|
| Capacity Charge:         | \$10.50 per kW of billing demand |
| Energy Optimization Fee: | \$20.00 per month                |
| Energy Charge:           | 3.6¢ per kWh                     |

**Rate D: Primary Rate**

**(Minimum kw: 60% of last 11 months or minimum – 25 kw - \$221.25)**

|                          |                                 |
|--------------------------|---------------------------------|
| Capacity Charge:         | \$8.85 per kW of billing demand |
| Energy Optimization Fee: | \$200.00 per month              |
| Energy Charge:           | 3.5¢ per kWh                    |

---

*Fuel and Purchased Power Cost Adjustment:* The fuel and purchased power cost adjustment shall consist of an increase or decrease of 0.0109 mills per kWh for each full 0.01 mill per kWh that the average cost of fuel and purchased power for the month is above or below 35.00 mills per kWh delivered to the distribution system.

The adjustment shall apply to the second billing month following the calendar month in which the fuel is burned and/or the energy is purchased.

*Power Factor:* If the average power factor during the billing period is .900 or higher, the capacity charge will be reduced by 2%. The credit shall not be used to reduce the minimum charge or the capacity charge when based upon 60% of the highest billing demand of the preceding 11 months.

If the average power factor during the billing period is less than .800, the capacity charge will be increased by the ratio between .800 and the customer's average power factor during the billing period.
